AAKASH SANGANI

Computer Science · Product · Strategy

Mumbai, India · aakash.sangani2410@gmail.com · linkedin.com/in/aakash-sangani-3149a11a7 · github.com/aakash2410 · aakash2410.github.io

SUMMARY

B.Tech Information Technology graduate with 3+ years in enterprise analytics, fintech growth, and AI governance consulting. Ships AI systems end to end — edge inference, RAG, MCP servers, agentic products — and owns the product side with them: requirements, product logic, evaluation criteria, and stakeholder work with government, multilateral and Fortune 100 clients.

TECHNICAL SKILLS

Languages and data: Python, SQL, pandas, PostgreSQL, Apache Spark

AI and ML: RAG, agentic AI, MCP servers, LLM evaluation and red-teaming, INT8 quantisation and edge inference, Bayesian inverse reinforcement learning, scikit-learn, TensorFlow, SHAP, IBM AIF360

Infrastructure and delivery: AWS, Docker, Ansible, CI/CD gates, SARIF reporting, RS256-signed JWTs

Product and strategy: product logic and requirements, evaluation and scoring frameworks, A/B testing, SQL dashboards, team leadership, government and multilateral stakeholders

Governance frameworks: EU AI Act, NIST AI RMF, ISO 42001, GDPR/DPDP, HIPAA, OWASP ASI, MITRE ATLAS

PROFESSIONAL EXPERIENCE

AI Consultant Feb 2026 – present

Kalpa Impact Mumbai

- Digital public infrastructure and AI governance consulting for UNDP, DPGA, the Gates Foundation and Co-Develop.
- Sole builder of **The Specialist** on **Suno Sutra**, the open-source offline AI device from Digital India Bhashini (MeitY) and Current AI: a teacher asks by voice or camera and the device answers aloud in the local language from approved DIKSHA content, refusing when the corpus doesn't cover the question. Packaged as an additive overlay with an Ansible install path for the hardware team.
- Quantisation and parallel inference work on the same device: peak memory down 40%, end-to-end latency from ~8s to 2–3s across 22 Indic languages.
- Designed the evaluation framework for the **VYOMA Innovation Challenge** (₹80 lakh, run by Bhashini, Current AI and Kalpa Impact): jury rubric, use-case judging matrix and scoring thresholds, through to the finale at IIIT-Delhi.
- Built an internal RFP crawler with a scoring model that ranks incoming opportunities, rebuilt on free sources to run at near-zero cost, now used across the team.
- With the Principal Scientific Adviser's Office, wrote a section of *AGI Governance* on AI incident-reporting mechanisms India can adopt, drawing on the EU AI Act and California's SB-53.
- Verified edge-AI performance claims submitted to the Gates Foundation; wrote the reference architecture for AI-enabled coordinated care over ABDM-connected health systems. Supports internal operations, hiring and delivery across engagements.

Business Technology Solutions Associate → Senior Associate Sep 2023 – Jan 2026

ZS Associates Pune

- Launched an agentic AI analytics product for natural-language querying of sales-performance metrics.
- Owned incentive-compensation product logic for a Fortune 100 pharma client, delivered at 100% accuracy.
- Led a team of 4. Recognised as a top 1% performer firm-wide; promoted to Senior Associate within 8–10 months.

Product Analyst Intern Jul 2022 – Feb 2023

Bright Money Bangalore

- Launched a referral programme that saved $120K in customer-acquisition cost over 5 months.
- Built A/B testing infrastructure and SQL dashboards.

SELECTED PROJECTS

rag-compliance-auditor `github.com/aakash2410/MCP_RAG_Compliance`

Designed and built solo. Open-source package, published on PyPI.

- MCP server that certifies RAG and AI pipelines against the EU AI Act, GDPR/DPDP, HIPAA, SEBI/RBI and NIST AI RMF across 7 audit dimensions.
- Exposes 8 MCP tools, issues RS256-signed JWT certificates, and runs as a CI/CD gate with SARIF reporting, so it fits the pipelines teams already run.

Inverse-Objective Regulator `github.com/aakash2410/Inverse-Objective-Regulator`

Designed and built a black-box AI-safety auditing system; sole author of the accompanying arXiv paper.

- Infers a deployed agent's revealed objective from its tool-call traces via Bayesian inverse reinforcement learning and scores divergence from the declared purpose, emitting evidence a regulator can read, mapped to the EU AI Act, OWASP, MITRE ATLAS and NIST AI RMF.
- Open 8-agent benchmark of agentic failure modes. A deterministic open critic recovered planted divergence on 6 of 8 agents (mean r = 0.55) against a frontier LLM-as-judge (0.08 → 0.43), with near-zero variance and no API cost.

Credit Equity Audit of India `github.com/aakash2410/CreditAudit-India`

Independent fairness audit of household credit access.

- Two-stage, Heckman-style deep learning model of credit market participation and formal versus informal allocation on the NSSO 77th Round. Female-headed households had about 59% of the probability of market entry of male-headed households.
- Used IBM AIF360 adversarial debiasing and SHAP to reach near-ideal disparate impact at ∼73.2% accuracy.

Baby Cry Reason Detection 2022 – 2023

Final-year project, team of 3.

- Audio classifier for the cause of an infant's cry (457 samples; MFCC, spectral contrast and pitch features; SMOTETomek for class imbalance; soft-voting SVM + KNN), deployed in a Flutter app with a feedback loop for retraining.

EDUCATION

B.Tech, Information Technology 2019 – 2023

D. J. Sanghvi College of Engineering, University of Mumbai CGPA 8.90 / 10

- Merit scholarship covering 100% of tuition. Coursework: Advanced Data Structures (O, 95%), Probability & Statistics (O, 93%), Artificial Intelligence (A+, 84%), Discrete Structures (A+, 84%), Design & Analysis of Algorithms (A+, 83%), Statistical Analysis (A+, 81%).

PUBLICATION

Sangani, A., Doshi, P., & Sawant, V. "Unusual Social Media Behavior Detection Using Distributed Data Stream Mining." In *Practical Data Mining Techniques and Applications*. Auerbach Publications (CRC Press), 2022–23. Clickstream-based bot and hijack detection using per-cluster Very Fast Decision Trees on Apache Spark.
